

Crush This

WARWICK NY

Ground Control Excavating places rock and concrete in the mobile crusher to recycle and use as road base on a project in Tuxedo NY.

Crushing Concrete, Asphalt and Rock can be cheaper than exporting.

Concrete is the second most used material after water.

Just think about that for a moment. That's a serious amount of material. Can you imagine what that does for the environment when we start recycling this widely used product rather than sending in to landfills during demolition? Its not bio-degradable. It is going to

sit in the those landfills forever.

Hauling and disposing of concrete left behind when structures and roadways are demolished can be pricey. Purchasing new materials for new construction can be expensive as well. When we put the clean concrete in a mobile crusher and start to recycle, we can use this aggregate for new construction projects and road base. Its a win win for everyone: The contractor,

the owner and most importantly, it benefits the environment.

Go Green

On Site concrete and rock crushing services makes stone base on site for new asphalt and concrete services.
